Appendix 2b: Voucher Specimen Details

This list gives an overview of all of the voucher specimens examined by the various contributors or for which information was found in the literature.

The taxa are presented in the same order as the main text and appendix 1. In each taxon, the specimens are alphabetically order according to their country of origin, locality, museum and museum number.

To stand out, the type specimens are explicitly mentioned with the name they were assigned by their original descriptor, and a colour code has been used to indicate the category of type:
RED: Holotype, Lectotype, Neotype, Syntype, Type
BLUE: Cotype, Paralectotype, Paratype
GREEN: Allotype, Genotype, Topotype
(for details on the definition of these types, see the Glossary).

We hope this list might contribute to a more efficient use of the available voucher specimens. See Russo *et al.* (2017) for a discussion on the collection of voucher specimens for bat research, and who state (p. 242): "many studies requiring the examination of preserved specimens might successfully rely on what is already available in museums worldwide", as well as "Improving networking among museums and public access to collection databases (including those in minor institutions) would help us reach this goal without collecting further material when this is not necessary."

Warning:
As some of the information used to compile the following appendices was taken from online published catalogs (e.g. http://manisnet.org/portals.html), we are aware that some erroneous identifications might still be present. E.g. prior to the 2014 issue, a large number of specimens was reported as belonging to *Scotophilus nigrita* (Schreber, 1774). Discussions with fellow researchers (i.c. Peter Vallo) helped us to correct these identifications to *Scotophilus dinganii* (Smith, 1833). However, we believe that still quite a number of errors are included. We therefore are open for any suggestions on correcting the identifications or any other errors that might still be present.

CHIROPTERA Blumenbach, 1779
